ALMOND SWEET REFINED CARRIER OIL

INCI name: *Prunus Amygdalis*

Typical Country of Origin: United Kingdom

Product Specifications

Sweet almond oil has a mild, nutty aroma. It's an edible oil made from the kernels of sweet almonds. The oil is lightweight and absorbs easily, and is a great moisturizer for dry skin.

Technique of Extraction

After harvesting, almonds are hulled and dried before different methods are used to extract their oil. Refined almond oil is extracted from almonds using high-heat processing. Unrefined almond oil is created by pressing raw almonds without the use of high heat or additional agents. This low-heat process helps almond oil retain much of its nutrient content, making unrefined almond oil a better choice for culinary uses.
